Brainstorming for Alzheimer's Disease Prediction:

Brainstorming is a creative and collaborative problem-solving technique used to generate a wide variety of ideas and solutions for a specific topic or challenge. The primary goal of our brainstorming session was to encourage creativity, foster innovation, and explore the numerous possibilities for the problem.

Idea Prioritization

Idea prioritization is a crucial step in the brainstorming process, and it involves evaluating and ranking the generated ideas to determine which ones are the most promising and worth pursuing further. Idea prioritization helped us identify which project elements or strategies are most important and feasible. It allowed us to align the project's objectives and goals with the ideas generated during brainstorming.

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

🕒 20 minutes

TIP

Participants can use their cursors to point at where sticky notes should go on the grid. The facilitator can confirm the spot by using the laser pointer holding the **H** key on the keyboard.
